

# 5 good reasons for trading up to Kaspersky Lab

**KASPERSKY® OPEN SPACE SECURITY. KASPERSKY® HOSTED SECURITY SERVICE.**

## 1 Simply superior protection

Kaspersky Lab is consistently and independently rated no. 1 worldwide for virus detection rates and security responses\*, and our hosted services make managing security even easier.

## 2 Total security for complex networks

Built from the ground up as an integrated solution, Kaspersky Lab provides true centralised control for multiple platforms, with protection that extends beyond the workplace to mobile users.

## 3 Simple, fast, cost-neutral migration

Automatic removal of old anti-virus and related software, with rapid setup and deployment of your new system. We can even offset existing licence costs against Kaspersky Lab products.

## 4 UK-based telephone support

Our own UK technical staff provide helpline support for rapid resolution of queries within business hours.

## 5 Clear cost benefits

Extend service life of existing hardware and increase productivity by reducing non-business activity and content. Save even more with Kaspersky Lab hosted services.

**Whether you want more flexible and robust security, need better performance from your security software, or simply demand better support from your supplier, here are just five (of many) good reasons for moving up to Kaspersky Lab.**

Kaspersky Lab solutions include all the security features you'd expect — including comprehensive protection from viruses, spyware, malware crimeware, hackers, phishing, rootkits and spam — along with a true centralised management console and 'follow me' protection for individual users, making it simple to set up and use.

Kaspersky® Open Space Security supports all major platforms, operating systems and web servers. We designed it from the ground up to have a small footprint, minimising demand for system resources and allowing you to extend the life of existing hardware systems.

Our clear and transparent pricing system is based on the number of users and types of devices requiring protection: workstations, file servers, mail servers, internet gateways and mobile devices. Even smartphones and PDAs can be protected, making your security system readily and immediately scalable.

For even simpler administration, why not consider our hosted security services? We provide managed, integrated protection for businesses of any size, ensuring company email, web traffic and networks are free from malware and spam. Your system is looked after by our security experts 24x7, allowing your own IT staff to concentrate on core business processes. A Kaspersky Lab hosted solution typically reduces security costs by 30% or more. Connecting new users and offices is fast and needs no integrated planning.

# Kaspersky Lab – business solutions

**KASPERSKY® OPEN SPACE SECURITY. KASPERSKY® HOSTED SECURITY SERVICE.**

Kaspersky Lab business solutions are grouped into two product families: Kaspersky® Open Space Security – which you install and administer within your business – and Kaspersky® Hosted Security Services – a managed service providing real-time protection beyond the network boundary. Both families share the same advanced multiple detection technologies and rapid security responses for which Kaspersky Lab is renowned.

Each family comprises a series of core components, such as anti-virus products optimised for a range of operating systems and platforms, anti-spam, anti-rootkit and malware/spyware defence.

### Kaspersky® Open Space Security (KOSS)

KOSS uses a holistic approach to provide total protection at every level of the enterprise. All you need to do is select the appropriate tier you require to match your business model from one of the four KOSS variants shown in the comparison chart alongside.

KOSS includes advanced behavioural analysis, zero-day protection for new, unknown threats, automatic rollback of system settings, and endpoint protection with true ‘follow me security’ for individuals on the move. The most advanced features include complete blocking of lost or stolen handsets, and remote confidential data deletion.

	PDA's, Smart phones	Internet Gateway	Mail Server	File Servers	Work stations	Admin Tool	
							Kaspersky® <b>Work Space</b> Security
							Kaspersky® <b>Business Space</b> Security
							Kaspersky® <b>Enterprise Space</b> Security
							Kaspersky® <b>Total Space</b> Security

### Kaspersky® Hosted Security Service (KHSS)

There are three main components to KHSS. The **Hosted Web Security Service** scans all web traffic in real time and enforces company policy to protect users and employers. It scans for malicious content, malware and spyware, prior to reaching the user; the **Anywhere+ Service** extends security to cover roaming users, and also encrypts traffic to prevent eavesdropping when outside the office; The **Hosted Email Security Service** provides full protection against malware and malicious code, along with effective unsolicited email (spam) identification. As a hosted service, no client side updates, hardware or software are required. Services are simply administered and reported on using a single, secure web-based portal.

### About Kaspersky Lab

Kaspersky Lab delivers the world's most immediate protection against IT security threats including viruses, spyware, crimeware, hackers, phishing, and spam. Kaspersky Lab products provide superior detection rates and the industry's fastest outbreak response time for small and medium businesses, large enterprises and the mobile computing environment. Kaspersky Lab technology is also used worldwide inside the products and services of the industry's leading IT security solution providers.
